

# YORKSHIRE HATHAWAY

FINANCE

## ECOSYSTEM

WHITE PAPER

# INTRODUCTION

Our travel was started with a simple questionnaire.

Will the value of cryptocurrency<sup>(below crypto)</sup> increase if it continues to be burn until it reaches a finite point rather than an additional issue?

Everyone knows that the value of a thing is determined by supply and demand. In recognition of Satoshi's finiteness and value, Bitcoin has seen a price hike since 2009.

Moreover, there have been various projects so far in 2022 and most of them have been decided to go up and down with the half-life of Bitcoin. In most cases, prices rose despite additional issuance, and the original quantity was rarely burned from the initial volume.

Therefore, when the progress of the project is eliminated, its value naturally decreases and numerous cases of failure have been shown to date. But Yorkshire wants to stimulate the background of human psychology, not the immense theme.

We adopted an algorithm based on a thorough psychology of supply and demand, which inevitably connects to 'A company'. The Yorkshire ecosystem will refer to and further emulate all of its paradigms. Furthermore, we are confident that we can succeed with the crypto that the company despises.

We need to rethink what is the fundamental reason for Staking or DeFi, in high demand these days. Although there is a reason to issue additional paid-in capital increase and bonus issue in stocks according to their use, crypto has relatively insufficient results of superficial works compared to companies that actually exist.

Security is still vulnerable and dangerous compared to the existing banking sector, and large projects such as "Terra-Luna" even though they are not rug-pull, show that stable coin's 1\$ pegging can collapse at anytime.

It is time to looking for negative side of crypto.

# WHY YORKSHIRE?

We have undergone numerous transformations, transitions, and trials and errors from 2017 to 2022.

Yorkshire was originally to be built on simple meme coins. Our founder Seiji turned the original project upside down by referring to B\*\* H\*\*.

B\*\*'s Wa\*\* Bu\*\* has always thought negatively of the crypto market, and we, who have been using and studying blockchain for years, were just fallen leaves reeling from the words of such a huge Wall Street older generation financiers.

However, the technology of the blockchain that threatens the existing financial sector must be an innovative technology that changes everything, but Seiji thinks that it should be used more honestly and naturally.

At First, the supply will be limited. The initial number will be set at 21 million, the same as Bitcoin, and will be burned after a half-life in line with B\*\* H\*\*.

A free capital increase in stocks is not a means of raising permanent prices for nothing. Without innovative results, it is natural for prices to fall quickly, and it is operated under the name of AirDrop in the crypto market.

But we think it's more approach Staking than AirDrop, the amount of TVL tied up is considerable just by looking at Ethereum, Solana and Terra. Among them, Terra's TVL is ruined as you all know.

Our foundation's goal is to operate as classic as possible without being bound by technologies listed above, and the ultimate goal is to leave our efforts to market participants.

# OUR BACKGROUNDS

“Apartment produces rent, farms produce food, but Bitcoin produces nothing in itself” – W\*\* B\*\*

Seiji approached us with a unique perspective ahead of the issuance of the existing simple meme coin.

“I believe that the atrocities and conservative tendencies of existing vested interests can be built more strongly with the power of individual decentralization.”

“A token run by a large community is nothing unless individuals agree and do not trust it.”

Behind the GAMESTOP's stock price surge in 2021, there was anger from retail investors against short-selling forces in the past subprime mortgage crisis. The blockchain industry is still a technology that is heavily checked and regulated by vested interests, and we have the idea of expressing that anger at the price compare with ‘such company’.

Yorkshire is the first project to deal with a huge monster called Berk\*\* and it needs to be recognized by Blockchainers as a creation. As we will explain later, Seiji is a person who always says that imitation is the best creation.

But there is something that should not be misunderstood. BE\*\* and its representatives are having a positive effect on social and clearly the CEO and businesses to emulate. However, I wanted to show the ideology against crypto and that it was definitely wrong judgment.

**“Whether you're participating in this PROJECT or not, all of you who see this article should at least retail investors and never be Apes.”**

# THE VISION OF YORKSHIRE

I won't pay even \$25 for all Bitcoin in the world. - W\*\* B\*\*

In conclusion, we are scheme the highest price of a single crypto and even use it in real life.

We said in advance, It is going to converge to 1,471,303 YORKs over a period of half-life based on 21 million issues. Early entrants can hold more YORKs at a lower price as early as possible as you know, but the quantity is limited differently from other memes, so it will be relatively high per YORK.

No one issued a crypto against Wa\*\* Bu\*\*. Would you judge crypto to be false even if you went through Yorkshire yourself? Value is what people create. If the YORKERS unified, we will be able to deal with an elephant.

When Yorkshire later grows up and reaches a certain price, the short-term goal is to deliver 5% of the locked down YORK to Be\*\* Ha\*\*. Subsequent actions are for the YORKERS to observe and scale.

We are loyal to our holders, and it provides us with the means to grow exponentially. that act itself is our fundamental force.

Foundation will continue to expand this ecosystem with reinvestment, just as Ber\*\* Hat\*\* has engulfed other companies with investment, so that people will be more interested in the Yorkshire platform. Money comes from where it's interested, when it's collected, it's going to raise huge capital.

Our discriminatory Tokenomics, psychological approaches, and challenging spirit and anti-establishment will strengthen the platform's strengths and provide residual benefits to the YORK ecosystem.

As Bitcoin's half-life until 2140, we never thought about the crypto market would go bust before.(Excluding the scammers, of course) We know that with our faith and the power of Yorkshire, we will succeed in developing the ecosystem as a whole and reach a goal together.

Perfect moment n'est pas encore arrivé !

# TOKENOMICS OF YORKSHIRE

Before the YORK is listed on the exchange, it will be distributed strictly in SWAP.

- Transparent transaction details.
- NO Additional minting, Pre-mined rewards, Airdrops, Private sale.

Yorkshire will highlight our three flagship tokens.

- YORKSHIRE HATHAWAY FINANCE: #YORK A, #YORK B

- NFT for Maintaining Benefits for ‘YORK laboratory’

(We can't disclose right now, but we are currently developing a multi-platform like ‘Amazon’ with a private blockchain called Hyperledger Fabric, not a public blockchain such as BTC, ETH. YORKERS will benefit from a closely linked system as soon as the project is filed in the future.)

YORK A - Accompanies to BRK\*.A ( \$ 466,176 of 5/24/22)

YORK B - Accompanies to BRK\*.B ( \$ 310.5 of 5/24/22)

Unlike other projects, we have eliminated initial preemption and pre-mining at all, therefore we aim for unconditional decentralization.

BRK.A shares have never been split since their foundation and are expensive enough to bid \$ 466,176 per share.

This is based on management's beliefs, including Buff\*\*, they were concerned that lowering the price per share through stock split could lead to too many short-term sellers who buy and sell at any time.

If someone give the recognition of being attractive and the value of money to the ore, it becomes gold. We believe in Yorkshire's increasing value thoroughly and this is a challenge to coward-selfish authoritative economists.

# Token Distribution circumstances

Yorkshire Foundation have less percentage of Founders and Dev's pre-occupation. We believe being part of YORKER should come with benefits. Especially benefits YOU receive.

\* Yorkshire's exclusive wallet 'BARK' will be updated before listing on the exchange in the future. If Mnemonic is leaked or something unpleasant happens during SWAP, you can freeze your wallet immediately and it will protect your assets.

“Your profits, too!”

# THE FUTURE OF YORKSHIRE

**Founders & project** - This funds will be put towards to the financial relief the development administrator team's full-time focus on the ecosystem. We want these talented individuals to continue building the solid footing that they have given us with their time, money, and energy.

**Marketing** - Marketing costs will proceed with extremely limited funding. Separate airdrop will never proceed and will be paid manually as an emergency if necessary.

**Be\*\*sh\*\* Ha\*\*aw\*\*** - The objective and final direction of this project. Some projects give Vitalik Buterin to 50%, while others may think that the percentage of 5% is too small, but the founders including me, have decided that 5% of Yorkshire's market afterwards capitalization will be fair. (It will be curious after B\*\*'s behavior.)

**Private Roadmap** - Our private blockchain roadmap remains top-secret to ensure our continued advantage in this highly competitive area, but disclosing a basic overview will help us understand the intentions of our core development teams.

We will achieve long-term success by standardizing Yorkshire and integrating it into the global market. This will potentially enable real DAPP beyond the digital environment through NFT projects, starting with our YORK.A, YORK.B.

# WHY KLAYTN?

We have no immediate plans to use Ethereum, Solana, or Avalanche, which the majority of other projects use.

Cypress has been released in an open-source way and anyone can use it freely. Block creation time is about 1 second, which is remarkably high in processing speed compared to other blockchains (over 4000 TPS) and prioritized scalability.

Anyone can use it right away if the user wants and plans to operate it based on excellent technology and high accessibility.

Above all, main advantage is that the additional fee is used less. Low fees are essential for continuous development and maintenance of the organization without disposing of YORK. Although its recognition is low, Klaytn charges around \$1 even if the price rises, compared to Ethereum's \$70 to \$150 per transaction.

Of course, Ethereum and Solana are superior in terms of scalability, but they are still less regulated and listed on large exchanges such as Binance and OKX, so they are not lacking in accessibility.

Short finality is also a decisive reason. Finality; the time to guarantee that the transaction content in the block cannot be changed, and Klaytn can trade rapidly in 1 second, compared to Bitcoin taking up to 60 minutes and Ethereum up to 6 minutes. This is a tremendous strength not only in YORK but also in the NFT market in the future.

This means that liquidity can be expanded at extremely high TPS<sup>Transaction per speed</sup>.

Klaytn is also highly compatible with Ethereum chains, it is a developed using Ethereum source.

# CONCLUSIONS

The Yorkshire community began with a paradoxical idea. What could happen without stable coins and millions of dollars in generous funds? However, people who have studied in blockchain for a long time are trying to think positive and become YORKERS.

Honestly, I can't imagine YORK can beat BTC or ETH. But we can be confident that it is the cleanest and most transparent among MEME projects, and you can imagine that it penetrates humans themselves.

It's a very meaningful project that confronts individual beliefs and huge centralized, authoritative communities.

There is a saying that the cryptocurrency futures market is a zero-sum game and stocks are plus-sum. There are difference in dividends. If there are far more buyers than sellers, the price will only rise without falling. There's a short-selling function to prevent a sharp decline at a high point, but it's also a dangerous double-edged sword. You are also an investor in swapping or purchasing Yorkshire and we are always at risk.

However, 'RISK' which generally means danger, is a Latin etymology that implies 'challenge with courage'.

Yorkshire's ultimate goal is to go to a long-term plus-sum game where everyone benefits from a zero-sum game that someone earns, someone has to lose. In fact, blue-chip U.S. stocks have been going through that process for decades.

YORKER fellas, we're just getting started.

Sincerely, Seiji
